# Compartments

Maximum security for your IT

Do you need to ensure that your IT system has maximum security and is always protected against unauthorized access? We offer high-strength compartments so that you can create your own closed-off area within our data center!

Benefits

- Maximum security against access through complete spatial separation of the compartment with access control and video surveillance

- Highest availability from ≥ 99.999 % p. a. for power supply, air conditioning and backbone

- Traceability of events via logging of access control and archiving of video data for up to 90 days

- High-quality equipment with optional provision of high-quality racks and first-class accessories

- Best performance through high-performance and highly available data connection on request

Highlights

- Power supply as standard between 15 kVA and 60 kVA per compartment

- Size of compartments 38 m²

- Redundant power supply with online UPS

- Electronic access control

- Video surveillance of accesses with HD cameras

Details

With a compartment in the data center Hof, you have your own compartment within our data center, which is completely separated from the rest of the data centre and from other IT systems by fixed separating walls. The compartment has its own door, video surveillance, lighting, fire detectors and air conditioning. One compartment is 38 m² in size. If you need more space, several compartments can be combined. The access control system with logging and the video surveillance of the access via HD camera, each entry into the compartment is exactly is being captured. For you as a compartment customer, 24/7 access to the cage is of course free of charge. The standard service coverage for a compartment is scalable from 15 kVA to 60 kVA. A permanent online performance monitoring with monthly reporting of all security outflows provides security and transparency for planning and accounting. The use of inergen gas for fire protection protects your IT equipment in the event of a fire. Extensive range of accessories, such as additional cameras, highhigh-performance data connection to the company's own international backbone and high-quality racks with cold aisle containment offer you the opportunity to to design the data center in the data center according to individual requirements.

Surface area	Number of Racks	Power supply per Compartment		
38 m²	up to 16	15 kVA	40 kVA	60 kVA

Compartment	Implementation
Power supply	redundant with A and B feed as well as online UPS
Fire protection	Intergen extinguishing system with double equipment; direct connection to the fire brigade
Air conditioning	via cooling systems with heat exchangers and additional adiabatic cooling
Access	via transponder card with logging (free of charge 24/7)
Video surveillance	access monitoring with HD cameras (90 days archive)
Max. floor load capacity	500 kg/m²

Rack compound	Implementation
Number of racks per compound	16
Rack dimensions	48 RU 750 mm x 1100 mm
Cold aisle containment	Included (with two doors)
Cable runs	Above the racks
Illumination	Yes
