

Cloud Points

Fair resource accounting in your cloud

Our Cloud Points model makes your system flexible, scalable and affordable. Your cloud resources are billed on an hourly basis. The more resources you commit to, the cheaper the single point becomes.

Benefits

- Reduction of high investment costs through the possibility of entering into a needs-based commitment
- Hourly accounting of freely usable resources - depending on current requirements
- The larger the contingent you have purchased, the lower the price of the single cloud point
- Constant invoice during operation within the contingent, everything above and beyond this is charged on a straight-line basis

Highlights

- Hourly billing
- Use of the points for the most diverse cloud-resources such as
 - RAM,
 - CPU,
 - storage or
 - backup.
- Use of the points for the most diverse cloud-environments such as
 - vDatacenter,
 - noris cloud or
 - Private Cloud.

Details

Cloud Points are the pay-as-you-grow billing model for noris' cloud resources. The points can be used flexibly and can be used for almost any cloud resource. Whether noris cloud on OpenStack, vDatacenter on VMware, your private cloud or cloud storage. All resources you use can be billed with a quota. So you can reconfigure RAM, CPU, storage or backup at any time or use them on other platforms without having to release new internal budgets. Cloud Points are offered in different sizes of contingents. With the smallest contingents, you only have to make a very small commitment and are still freely scalable upwards, since points exceeding the contingent are also settled linearly. In contrast to conventional pay-as-you-grow models, the more commitment you make, the cheaper the individual cloud point will be. If it is known that many resources are needed and you book a larger contingent, you will save cash with the discounted conditions.

By using quotas according to your needs, you reduce your investment costs and thus the risk on your side.
