

## Cloud Storage

### S3-compatible storage in Germany

You are running an application with S3 interface and wish to prevent unauthorized access or hazards such as loss of data? Cloud Storage by noris network will be your solution of choice!

#### Benefits

- Unlimited, scalable storage capacity
- Flexible billing based on the cloud storage used on average per month
- Highest data integrity due to operation and storage of your data in Germany by certified staff
- Superior availability through self-healing redundancy mechanisms
- Inclusive of all costs, even for PUT, COPY, POST, LIST or GET requests
- High security through hosting in ISO/IEC 27001 and ISO 9001 certified German data centers

#### Highlights

- S3-compatible interface
- Multi-redundant cluster
- Geographically distributed across three data centers
- Operation in BSI-certified German high-security data centers
- Inclusive of traffic and all ancillary costs
- Powerful connectivity via own high-performance backbone

## Details

You are running an application with S3 interface and wish to store your data at a secure, remote location? Cloud Storage by noris network enables you to store your backup data, development environments, and large amounts of data associated with virtualization environments or databases in a high-redundancy storage solution in Germany.

Just select noris network's S3 gateway as destination device in your backup client with S3 interface to automatically save your backup data to the cloud storage in line with your configured backup scheme and conveniently comply with all criteria for secure backup operations. Unlike using a local storage system, you won't need to worry about scaling but instead save or delete data in the cloud storage whenever you want. Accounting will be based on the number of gigabytes of cloud storage used on average per month, and you won't accrue any additional costs for moving data, e.g. when submitting PUT, COPY, POST, LIST, or GET requests.

To handle the initial delivery of large data volumes, you may wish to send us a mobile data storage medium we can import for you (service charged on time & materials basis).

noris network's Cloud Storage product is a Ceph-based object storage cluster that is geographically distributed across three of our certified high-security data centers. Self-healing redundancy mechanisms ensure maximum availability of the storage. Of course, all data will stay within Germany. The use of the S3 interface, which has evolved into a de-facto standard, considerably reduces the effort you will have to invest in the integration of your application. This provides you with a user-friendly and convenient solution for making your data secure and highly available.
