

Microsoft Online Services Added Value for your Microsoft Cloud

Do you want to use Microsoft's online services simply, securely and conveniently? Do you face challenges when interacting with existing systems, remote desktops and your local clients? Then use the Microsoft Online Services from noris network!

Benefits

- No double licensing of local clients and remote desktops or virtual desktop infrastructures, since noris network is a QMTH (Qualified Multitenant Hoster) at your side
- Single sign-on on all systems through central user management on your existing Active Directory and use of Active Directory Federation services without publishing user credentials
- Easy deployment and operation through noris network with central contacts for all services
- Simple onboarding into the Microsoft cloud through the comprehensive onboarding service of noris network
- Relief from standard tasks such as operating the ADFS infrastructure

Highlights

- QMTH (Qualified Multitenant Hoster)
- CSP Tier 1 Direct (cloud service provider)
- Comprehensive onboarding to the Microsoft cloud
- Setup and operation of your ADFS infrastructure
- Optionaler Cloud Interconnect (ExpressRoute) to Microsoft Azure
- All services from one single source
- Operation by certified and qualified IT experts

Details

The Microsoft Online Services from noris solve your onboarding challenges in the Microsoft Online world such as Office 365 or Microsoft Azure and relieve you of standard tasks such as operating an ADFS infrastructure (Active Directory Federation Services) - conveniently and securely! Microsoft Online Services include, depending on your requirements, the provision of Microsoft Online Plans, Microsoft Online Onboarding, and the operation of your ADFS infrastructure. Optionally a Cloud Interconnect (ExpressRoute) is possible to connect your setup with Microsoft Azure.

As part of the CSP Tier1 contract (Cloud Service Provider) with Microsoft, noris network can offer you even more comprehensive services than you are used to anyway. Through this partnership with Microsoft, you can now purchase all Microsoft Online licenses from noris at low prices. As noris is a QMTH (Qualified Multitenant Host), you can use these licenses not only on shared platforms such as remote desktops or virtual desktop infrastructures at noris, but also on your local clients - without double licensing.

If you want to access all Microsoft resources via single sign-on, regardless of whether it is a local client or a terminal server from noris, you can make use of noris's Microsoft Online Onboarding. We support you in connecting your setup and your Active Directory to the Microsoft Cloud. As part of the onboarding service, we synchronize users from your Active Directory with Microsoft Online, set up the Federation with Microsoft Online Services and integrate your DNS domains at Microsoft. This gives you an integrated system from one single source.

Within the scope of Microsoft Onboarding we advise you comprehensively about your infrastructure for the Active Directory Federation Services and optionally take over the connection to your Active Directory and the operation. Depending on requirements, the ADFS infrastructure can also be designed redundantly to improve the availability of the system even further. Depending on the system architecture, it may be necessary to use an ADFS proxy, which can of course also be set up.

Microsoft Online Onboarding	Description
Active Directory Synchronization	Setup of synchronization of the customer's Active Directory to Microsoft Online
Federation Services	Setup of Federation Services for Microsoft Online
DNS Domains	Integration of the customer's DNS domains at Microsoft Online
