

Part Rack

The best Place for small IT-setups

Demands for quality, security and availability are never a matter of setup size. The part racks from datacenter.de provide the highest level of quality even for smaller setups. Hosting the way you want it!

Benefits

- Fully scalable in terms of space, performance and connection
- Highest level of availability of $\geq 99,999\%$ per annum for power supply, air conditioning and backbone
- Secure housing in a high-performance data centre with video surveillance, early fire detection and security services
- Quick, professional support from on-site specialists
- Low rates for power and traffic
- A wide range of additional accessories to choose from

Highlights

- Award-winning, certified data centres*
- Redundancy for all vital systems
- Power supply via A/B feeds
- Comprehensive SLAs
- 24/7 access to the data centre
- Option to reserve additional racks for later expansion
- Option for high-performance Internet connection with low traffic rates

Details

datacenter.de provides part racks in Europe's most modern data centres – the award-winning, certified, high-performance, high-security NBG6 data centre in Nuremberg as well as the even further developed data centre MUC5 in Aschheim in the east of Munich. For more information, please see the data centre description.

The part racks are of the highest quality and provided by major vendors. It is also possible to rent the adjacent full rack or part rack in order to allow for future expansion. All part racks have a redundant power supply with A and B feeds. All services, availability levels, reaction times and recovery times are ensured by an SLA.

It goes without saying that you can access your server at any time, 24/7, upon prior arrangement. Each rack can be connected to the Internet via a high-performance infrastructure through redundant 10 Gbit/s uplinks. In addition, you have a range of additional accessories to choose from, including rack switches, data connections (including to other data centres), remote hand service, backup etc.

Data centre	Nürnberg Süd NBG6	München Ost MUC5	
Max. number of usable rack units	15	13	28
Power consumption (versions)	1, 2 or 3 kVA	1, 2 or 3 kVA	1, 2, 3, 4, 5 or 6 kVA
Fuses	2 x 16 A	2 x 16 A	2 x 32 A
Multiple-socket outlets	each 2 with 15 ports	each 2 with 12 ports	each 2 with up to 40 ports
Width x depth	600 mm x 1200 mm		600 mm / 800 mm x 1200 mm
Power supply	230 V redundant (A and B feeds)		
Separate door	yes		
Partition from other rack areas	yes		
Data centre access	24/7		
Additional costs included	air conditioning, additional charges, online UPS and emergency power supply		

*VdS 3406, ISO 27001 based on IT baseline, PCI DSS and ISO 14001 apply for NBG3, 4, 5, 6 and MUC5; EN 50600 applies for MUC5
