# Terminal Server

More flexibility at lower costs

A Terminal Server from noris enables you to host applications and resources centrally and publish them to remote client devices, regardless of the location and platform of the end device - scalable, flexible & secure!

Benefits

- Users can access their „work computer" anytime, anywhere

- Very easy maintenance through central management

- Applications are installed only once and everyone receives updates at the same time

- Extends the life of desktop hardware

- Freely scalable performance of the terminal server through use of a flexible pay-as-you-grow model

- Microsoft Office is pre-installed free of charge if required, the licenses can be obtained separately from noris

- Browser-based access (HTML5) in the Citrix variants

Highlights

- Free choice between Citrix and Microsoft

- Cost reduction through

  - licenses,

  - energy,

  - installation and maintenance costs as well as

  - expensive high-end hardware.

- Optional effective access protection through managed two-factor authentication

- Optional enhanced endpoint protection trough SentinelOne's Endpoint Protection

noris network

Details

A noris Terminal Server enables you to host applications and resources centrally and publish them to remote client devices, regardless of the location and platform of the end device. A Terminal Server offers several advantages. First, Terminal Servers provide end users with access to corporate resources from anywhere and from any device. Second, they allow a single maintenance point and infrastructure monitoring from a central dashboard. Third, applications are set up just once and regularly updated on the server, so there is no need to install or update a program on any computer in the network. In addition, thin clients allow you to save costs and energy for a better ROI. It also extends the life of desktop hardware and significantly improves network security. User maintenance takes place in the central directory service and is the customer's responsibility in the standard model. The installation and maintenance of additional software will be charged on a time and material basis. noris offers you a free Office installation, licenses can be purchased separately.

The accounting of the hardware underneath the Terminal Server is based on our cloud points, so that it can be flexibly scaled and more performance can be easily purchased. In addition, the corresponding Active Directory and OS operation is included.

We offer Terminal Servers based on Citrix and Microsoft in different variants. Citrix offers several advantages over the Microsoft Terminal Server, such as handling of the graphics display, improved printer integration and local text echo for latency-free writing, even in the event of connection problems. A sophisticated web interface enables your helpdesk to display an overview of the status of user connections at any time and to support users by mirroring in case of problems. Citrix also supports several types of clients (HTML5, Windows, Mac, Linux, iOS, etc.). The Citrix versions also include the XenApp licenses, the Enterprise version with PVS (Provisioning Services) the XenApp Platinum license.

The distinguishing features of the variants can be found in the following table:

Terminal Server	Citrix		Microsoft
Variants	Business	Enterprise	Business
Number of possible Named User	10 - 300	50 - 1500	10 - 300
Optional Gateway	Netscaler		Remote Access
Availability classes	HR or HA	FT	HR or HA
Specifics	■ Browser-based access (HTML5) ■ Handling the graphic display ■ Improved printer integration ■ local Textecho
